What is the difference between the newer Bose 3-2-1 GS Series III as compared to their previous version, the Series II. The Series III is available for \$999 online (I can't find anyone selling it cheaper). And the Series II is available for a variety of prices, from \$699 to \$999. Does anyone know what the difference is between the two series (aside from the prices).

~~Bose 3-2-1 GSX Series III (graphite) Series Specs—CNET~~

The 3-2-1 was replaced by the "321 Series II" in 2004, which included two small speakers and a subwoofer. The 321 Series II was praised for its performance for movies, but was criticised for its performance with music and for lacking a HDMI connection. The 321 Series II GS had similar outcomes, however it was also criticised for value for money.

~~Bose home audio products - Wikipedia~~
Bose has opted for just a single full-range driver, which fires downwards into an acoustic deflector to spread sound 360 degrees from its ovalar chassis. This means you ' re getting uniform mono sound all the way round, which is a canny idea when you bear in mind the numerous speakers that have tried and failed to deliver cohesive 360-degree sound from multiple drivers.
