The Q and R-class destroyers were two classes of sixteen War Emergency Programme destroyers ordered for the Royal Navy in 1940 as the 3rd and 4th Emergency Flotilla. They served as convoy escorts during World War II. Three Q-class ships were transferred to the Royal Australian Navy upon completion, with two further ships being handed over in 1945.

During World War II, the United States began building larger 2100-ton destroyers with five-gun main batteries, but without stability problems. The first major warship produced by the U.S. Navy after World War II (and in the Cold War) were "frigates"—the ships were originally designated destroyer leaders but reclassified in 1975 as guided missile cruisers (except the Farragut class became guided missile destroyers). These grew out of the last all-gun destroyers of the 1950s.

The Akizuki class were formidable ships and arguably the finest destroyers of WW II. These large, seaworthy destroyers had a full load displacement of 3700 tons. They were designed primarily as AA destroyers and fielded a main battery of 8-3.9" (100mm) DP guns and (initially) a light AA battery of four 25mm guns. The 25mm AA battery was progressively increased to between 40 and 51 guns on surviving ships by the end of the war.

Japanese destroyers of World War II included some of the most formidable destroyers (駆逐艦, kuchikukan) of their day. This came as a nasty surprise to the Allies, who had generally underestimated Japanese technical capabilities.The Japanese had reassessed their naval needs in the mid-1920s and, placing an emphasis on ship and weapons technology and night fighting expertise, developed a ...
