New ETSI EN 300

328 V1.8.1 for

Wireless Devices

using 2.4 GHz Band

The number of

wireless devices using

technologies such as

WLAN, Wifi, Zigbee

or Bluetooth® has

grown rapidly over

the past years. The

EU changed the ETSI

Read Book En

300 328 V1 9 1

EN 300328 standard,
affecting the
wideband
transmitters
operating in the
2.4GHz band,
mandatory for market
access into Europe.

A railway is a
complex distributed
engineering system:

Read Book En

300 328 V1 9 1

the construction of a new railway or the modernisation of an existing one requires a deep understanding of the constitutive components and their interaction, inside the system itself and towards the outside world. The former covers the various subsystems (featuring a complex mix of high

Read Book En

300 328 V1 9 1

power sources,

sensitive safety

critical systems,

intentional

transmitters, etc.) and

their interaction,

including the specific

functions and their

relevance to safety.

The latter represents

all the additional

possible external

victims and sources

of electromagnetic

Read Book En

300 328 V1 9 1

interaction. EMC thus starts from a comprehension of the emissions and immunity characteristics and the interactions between sources and victims, with a strong relationship to electromagnetics and to system modeling. On the other hand, the said functions are

testing and
demonstration.

Compatibility

And

Much energy has been spent on the subject of spectrum scarcity that would threaten to stunt the growth of wireless technologies and services. This concern comes on the heels of the great successes of both cellular

Read Book En

300 328 V1 9 1

Electromagnetic
Compatibility
And
communications and
consumer oriented
communications like
Wi-Fi and Bluetooth
that have changed the
way people use
computers and
communications and
that have led to the
creation of large new
markets for products
and services. The
response of many
spectrum regulators

Read Book En

300 328 V1 9 1

Throughout the world in addressing these concerns has been to consider releasing more spectrum for unlicensed or for shared use. An example is the spectrum that is released by the transition to digital TV: the frequencies freed up are destined, in part, to new

Read Book En

300 328 V1 9 1

Applications that would be license exempt. A possible beneficiary of new spectrum releases would be "the smart grid", a networked application of digital sensor and control technology to the energy delivery segment of the energy utility industry. This policy

Read Book En

300 328 V1 9 1

has heightened the interests of all involved in spectrum sharing and many proposals are being considered or brought forward. However, theory in this area is scarce and practice proves resistive of quick solutions. A case in point is RLAN/radar spectrum sharing in

Read Book En

300 328 V1 9 1

the 5GHz range: six years after the ITU-R allocated this shared spectrum, the rules for sharing as well as the means to verify compliance with these rules are not fully mature. Another recent development is the interest in spectrum pricing and trading which tend to focus on the

Read Book En

300 328 V1 9 1

economic aspects of
spectrum sharing at
the expense

understanding of the
limitations as well as
the technical
possibilities of
spectrum sharing.

Cellular Internet of
Things: Technologies,
Standards and
Performance gives
insight into the recent

Read Book En

300 328 V1 9 1

Electromagnetic
Compatibility
And
deployments of
wireless sensor
networks. Included
were, nonetheless,
emerging forms of
sensing such as those
that leverage smart
phones, Internet of
Things, RFIDs, and
robots. Indeed, when
working with real-
world experiments or
deployments, many
new or unforeseen

Read Book En

300 328 V1 9 1

issues may arise: the network environment may be composed of a variety of different technologies, leading to very heterogeneous network structures; software development for large scale networks poses new types of problems; the performance of prototype networks

Read Book En

300 328 V1 9 1

may differ significantly from the deployed system; whereas actual sensor network deployments may need a complex combination of autonomous and manual configuration. Furthermore, results obtained through simulation are typically not directly applicable to

Read Book En

300 328 V1 9 1

Operational networks;
it is therefore
imperative for the
community to
produce results from
experimental
research. The
workshop collected
the state of the art in
emerging and current
research trends
dealing with Real-
world Wireless
Sensor Networks,

in wireless

communications.

Read Book En 300 328 V1 9 1 Electromagnetic Compatibility

This book explores three interwoven and challenging areas of research and development for future ICT-enabled applications: software intensive systems, complex systems and intelligent systems. Software intensive systems are systems

Read Book En

300 328 V1 9 1

that extensively
interact with other
systems, sensors,
actuators, devices and
users. More and more
domains are now
employing software
intensive systems, e.g.
the automotive
sector,
telecommunication
systems, embedded
systems in general,
industrial automation

Read Book En

300 328 V1 9 1

systems and business applications.

Moreover, the

outcome of web

services offers a new

platform for enabling

software intensive

systems. Complex

systems research is

focused on the overall

understanding of

systems rather than

their components.

Complex systems are

Read Book En

300 328 V1 9 1

very much

characterized by the
changing

environments in

which they operate

through their

multiple internal and
external interactions.

They evolve and

adapt through

(internal and

external) dynamic

interactions. The

development of

Read Book En

300 328 V1 9 1

intelligent systems and agents, which is increasingly characterized by the use of ontologies, can be beneficial for software intensive systems and complex systems alike.

Accordingly, recent research in the areas of intelligent systems, robotics, neuroscience,

Read Book En

300 328 V1 9 1

artificial intelligence,
and the cognitive
sciences is essential
to the future
development of
software intensive
and complex systems.
