You are probably reading this bit because you ride a bike and you want to know how it works. Or maybe you wish to learn a thing or two about motorcycle maintenance. Better still, you probably wish to attempt servicing and maintaining your bike, all by yourself (the DIY way). This is the book for you then. To most of us, motorcycle maintenance is cleaning the bike and taking it for a service frequently. But there is actually much more to it than cleaning and oiling. It involves performing a specific set of tasks that need to be carried according to a specific schedule. But any of this information is not readily available and is too technical for the regular bike owner. This book aims to provide all that necessary information in the most straightforward simple fashion. It has been written specifically to serve an absolute beginner to motorcycle maintenance and the whole Do It Yourself (DIY) ethic. This book tries not just to show how easy motorcycle maintenance is but also to show how much fun it actually can be.

Color, doodle, and draw in unicornland with this magical activity book! Ready for a magical adventure? Packed with coloring pages, step-by-step drawing instructions, and unicorn-themed activities, there's all kinds of fun to be had inside this wonderful book. Use the included five colored pencils and collectible unicorn pencil toppers to add color to the unicorns' sparkling world of rainbows, friendship, and magic!

Direct injection enables precise control of the fuel/air mixture so that engines can be tuned for improved power and fuel economy, but ongoing research challenges remain in improving the technology for commercial applications. As fuel prices escalate DI engines are expected to gain in popularity for automotive applications. This important book, in two volumes, reviews the science and technology of different types of DI combustion engines and their fuels. Volume 1 deals with direct injection gasoline and CNG engines, including history and essential principles, approaches to improved fuel economy, design, optimisation, optical techniques and their applications. Reviews key technologies for enhancing direct injection (DI) gasoline engines Examines approaches to improved fuel economy and lower emissions Discusses DI compressed natural gas (CNG) engines and biofuels
