Whilst Model Based
Testing (MBT) is an
improvement over
manual test
specification, the leap
from manual testing to
MBT can be hard.

Current MBT tools only
allow development of

File Type PDF

How To Do

Manual Testing

models from scratch,
without reuse of existing
manual test
specifications.

Conversely, current
MBT tools do not
facilitate partial
automation of manual
test cases, e.g. to
automate only the test
initialization procedure.
Finally, existing MBT
tools do not identify
areas of the system that

File Type PDF

How To Do

are not testable due to defects, which may in turn conceal other defects. We propose a new MBT approach that addresses these shortcomings. The approach uses a form-oriented model that clearly represents the actions, pages and fields of a web application. Instead of having to specify a test model

File Type PDF

How To Do

Manual Testing
Step By

from scratch, existing manual test cases can be used without

modification as part of a test model specification.

This means that developers can move from manual testing to MBT without any additional cost.

Furthermore, the approach allows developers to use test models to partially

File Type PDF

How To Do

Manual Testing tests.

A test model can be used to automate the initialization step of manual test cases, hence making it easier to specify manual tests.

Finally, the proposed approach can identify areas of the application that are unreachable due to defects using an online testing strategy.

This provides an

File Type PDF

overview of all testable parts that have been covered, as well as areas where additional defects may be concealed. The approach was implemented in a novel MBT tool called FormTester, and evaluated with real web applications. One small and one mid-sized application were tested using manually

File Type PDF

How To Do

Manual Testing

specified tests; one large, complex application was automated using the MBT tool. The tool's performance gains over manual specification were evaluated. Manual test cases were used to specify the model, and their test initializations were generated automatically. This improved time spent

developing test cases
(Minutes/Test) by about
30%. The same types
and similar numbers of
defects were discovered
using the tool as manual
specification, indicating
a similar effectiveness
in defect detection.
