This book includes numerous illustrations to help reinforce written material. It provides a thorough introduction to the world of horticulture. This latest edition includes new chapters on water gardens, dish gardens, and prairie gardens for the more adventuresome gardener.

Designed to provide readers with a full appreciation of the wonderful world of horticultural science, the Second Edition of INTRODUCTION TO HORTICULTURAL SCIENCE covers everything the reader needs to know in a comprehensive format that is easy to understand. Coverage includes critical topics such as fundamental concepts, cutting edge research, careers in horticulture, the relationship between horticulture and the environment, classification of plants, and plant anatomy. Readers are also introduced to key concepts such as plant propagation, media, nutrients and fertilizers, plants and the environment, plant growth regulators, post harvest physiology and pest management, greenhouse structures, nursery site selection, development and facilities, producing nursery crops, and floral design. Through enhanced visual aids and the inclusion of recent trends in the field, the second edition has been designed to peak reader interest and improve reader understanding. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Across civilizations and over the ages, attractive plant variation has been assembled and organised into gardens for aesthetics and recreation. In India, interest in gardening has increased progressively, particularly among the 'home gardeners'. In 14 chapters, 'Ornamental Plants for Gardening' documents the myriad variation available in diverse categories of ornamentals plants (annuals; roses; chrysanthemums; tuberose; bulbous plants; shrubs & climbers; cactus & succulents; hedges, edges, topiary & bonsai; and turf grass) for enhancing the attractiveness of both small and large gardens. Theoretical and practical guidance is provided about varieties; soil bed preparation; cultural practices; irrigation; fertilization; disease, pest and weed control; preservation of seeds & other forms of propagation units. Each chapter has been authored by expert/s in the relevant area and bears the seal of authenticity. It is our hope that the book will meet the information requirements of the academic community, students and all those interested in practical gardening.

Plants: structure, classification, growth, reproduction, and utilization; An overview of the fruit crops and ornamental plants; Major agronomic, vegetable, and fruit crops.

This comprehensive book provides a thorough scientific foundation on the growth and care of plants common to all horticultural commodities. Continuing in the tradition of the first edition, it incorporates the principles behind the techniques described in other "how-to" horticulture texts. By providing readers with a thorough grounding in the science of horticulture, it successfully prepares them for more specialized studies in nursery management, floriculture, landscaping, vegetable and fruit science.

Essential reading for all studying horticulture and keen gardeners. This clear introduction to the principles underlying the practical applications of horticulture opens up the excitement of growing plants and garden development without readers wading through complex information. Written by a team of highly motivated and experienced horticultural tutors, the text supports the newly restructured RHS Level 2 qualifications with related Level 3 topics in boxes and signposting to Level 4 topics, together with other horticultural qualifications at these levels. Full colour images tied closely to the text and practical case study boxes inspire readers by making topics relevant to their own horticultural experiences. A comprehensive glossary helps build confidence in the use of classical horticulture language as well as new developing terms, and end-of-chapter questions encourage readers to apply what they have learnt. Extensive online supporting material includes mind maps showing the relationship of topics and aiding students in revision.

Since 1983, when the last edition was published, there have been important new developments in crop husbandry methods as well as an

increasing awareness of political and ecological pressures. These pressures have resulted in considerable changes in crop husbandry and the new edition reflects these changes by updating all chapters and by including new sections on combinable crops, organic farming and nitrogen leaching. As in previous editions this book presents all the modern crop production methods in a comprehensive and easily understood manner. As such it should continue to be the standard textbook for all crop husbandry syllabi at all levels of agricultural teaching.
